◼ **Overview**

Apple has introduced a new security layer from Mac OS X 10.9 ("Mavericks"). the recently released Mac OS X 10.10 ("Yosemite") also has this security layer. The security restricts the available feature sets of the KYOCERA Mac Driver installed on Macs running OS X 10.9/10.10. Specifically, the added security prevents the loading of Print Dialog Extensions (PDEs). this limitation is occurred in Mac Driver ver1/ver2/ver3.0/ver3.1. we already released a patch tool for Mac OSX 10.9 in order to correct this issue.

Now,patch tool is supported for MAC OSX 10.10. PDE Patch Tool for Mac OS X 10.10 updates these PDEs to be sandbox-compatible in the latest OS X operating system.

In addition, Mac Driver ver 3.2 has some limitation in MacOS 10.10. then,we update Mac Driver ver3.2 in order to support Mac OSX 10.10 now. We recommend the latest driver.

 Applying the Patch

The PDE Patch Tool for Mac OS X 10.10 modifies the preferences list for each PDE in the KYOCERA Mac Driver.

Download the PDE Patch Tool installer (a .dmg file) to your desktop. The installer must be

downloaded and run on each desktop computer that requires updating; the tool can't be

applied to desktop computers remotely.

Double-click the installer, and then follow the on-screen instructions.

When running the tool, the following confirmation dialog will appear:
